AllensSeed.com

	Spring	Early Summer	Late Summer	Fall
	April-Mid May	Early June	Late August–Early September	Late October-Early November
Recommended Program For Established Turf	High nitrogen fertilizer plus crabgrass pre-emergent for long term control of crabgrass	High nitrogen fertilizer plus broadleaf weed control	Slow release fertilizer to maintain turf vigor and growth	High potassium fertilizer to maintain turf strength for the winter and to insure early spring green.
Recommended Program For Immature Turf	Starter fertilizer for new grass plus Tupersan crabgrass pre-emergent (the only product that allows new seed to germinate)	Re-application of Tupersan plus a turf builder fertilizer to stimulate growth of new turf. Continue until 6th mowing of new grass	Apply longer lasting crabgrass prevention plus a fertilizer with low chance of shocking heat stressed turf	High potassium fertilizer to maintain turf strength for the winter and to insure early spring green
Recommended Additional Applications	Control of existing grub problem, if any	Apply preventative products for grub control	Ideal time to begin re-seeding summer damage spots	Control of existing grub problem, if preventative measures were not taken
Additional Applications As Needed	Preventative fungus control, to be re-applied every 14-30 days for effective results	Use Aquatrols for the reduction of heat stress and overall improvement of turf health	Use insecticides to control common surface feeding insects, such as ants, chinch bugs and much more	Maintain a proper ph balance through the use of lime or SoluCal
